

10 — AI Prompt Engineering & AI Services

ChatGPT · Claude · Custom GPTs · Automation · Consulting · 2026

■0 capital · Phone or laptop · High leverage with free/cheap tools

How to sell AI-powered services from Nigeria: content systems, prompt libraries, custom GPTs, workflow automation and practical AI consulting for small businesses and creators. Focuses on real client problems, not hype.

1. What This Hustle Is

You use large language models and related AI tools to deliver faster, higher-quality work for clients. Services include: AI-assisted content writing systems, custom prompt packs, Custom GPTs / agents for specific businesses, social media content engines, research & summarisation, basic automation (Zapier / Make + AI), and short consulting sessions that help non-technical owners actually use AI in their workflow. You sell outcomes (time saved, content volume, consistency), not “I use ChatGPT”.

2. Realistic Earnings Path 2026

Stage	Typical services	Monthly range
Starter (0–3 mo)	Prompt packs, basic content drafts, small gigs	■40k–■200k
Growing (3–9 mo)	Retainers for content systems + Custom GPTs	■200k–■700k
Established	Multi-client retainers + consulting + products	■700k–■2m+

Dollar clients and retainers produce the highest naira income. Selling one-time prompt packs or digital products on Selar adds leverage. Pure “prompt engineering” as a standalone title is less valuable than solving concrete business problems with AI.

3. High-Demand AI Services That Sell

- AI content systems (blog + social + email packs for one business)
- Custom GPT / agent for a specific workflow (customer replies, research, SOPs)
- Prompt libraries & playbooks for niches (real estate, coaches, e-commerce)
- AI-assisted social media management (calendar + captions + variations)
- Research, summarisation and competitive analysis packages
- Simple automation (form → AI summary → Slack / email / Notion)
- AI image / design packs with Midjourney, Ideogram or Canva AI
- Short AI onboarding / training sessions for small teams

4. Exact Setup (Phone + Free Tools Possible)

4.1 Core tools

- ChatGPT (free or Plus) / Claude / Gemini — primary LLMs
- Canva AI / Ideogram / Leonardo for visuals
- CapCut for AI-assisted video if offering content
- Notion or Google Docs for delivery and knowledge bases
- Zapier / Make free tiers for light automation
- Payoneer / Grey for international payments; Paystack for local

4.2 Build a 5-piece proof pack in 7–10 days

1. One complete sample content system (e.g. 10 social posts + 2 emails + blog outline for a fictional or real local business).
2. One Custom GPT or detailed prompt chain that solves a real task.
3. One short Loom / phone video walking through your process.
4. A clean one-page service menu with prices.
5. Optional: a small free or low-cost prompt pack on Selar to start collecting buyers.

5. Platform & Client Order

1. LinkedIn — position as “AI systems for [niche] businesses”.
2. Fiverr — clear gigs: “I will create a custom GPT for your business”, “AI content system”, etc.
3. Upwork — bid on content, research, automation and AI-related jobs; highlight AI leverage.

4. Direct outreach to Nigerian SMEs, coaches and creators via WhatsApp / Instagram / LinkedIn.
5. Selar / Gumroad for digital products (prompt packs, templates, mini-courses).

6. Sample Outreach Message

“Hi [Name], I saw [specific post or product]. Many [type of business] are spending hours writing captions and emails. I build simple AI systems that produce a month of consistent content in a few hours, tailored to Nigerian audiences. Here's a short sample for a similar business: [link]. If you'd like a paid test week or a Custom GPT for your workflow, I'm available.”

7. Pricing Rules

- One-time prompt pack / small system: ■15k–■50k or \$20–\$80.
- Custom GPT + training: ■40k–■120k or \$50–\$150.
- Monthly content/AI retainer: ■80k–■300k+ depending on volume.
- Always deliver a clear “before → after” or sample so the client sees the value.
- Raise prices as demand exceeds capacity; productise repeatable work.

8. Common Mistakes

- Selling “I will use ChatGPT” instead of a clear business outcome.
- Delivering unedited AI output — clients notice quality issues fast.
- Over-promising full automation when the client still needs human oversight.
- Ignoring Nigerian context (language, payment rails, local examples).
- Building complex tools no one asked for instead of solving one painful task well.

9. 30-Day Action Path

Days 1–7: Master ChatGPT/Claude prompting. Create 3 strong sample outputs + one Custom GPT. Open payment rails. Optimise LinkedIn.

Days 8–14: Launch 2–3 Fiverr gigs. Send 10 personalised outreach messages. Publish one free or low-cost prompt pack on Selar.

Days 15–30: Deliver first paid jobs. Collect testimonials. Refine one niche (e.g. coaches or e-commerce). Convert one client to a small retainer.

Month 2+: Aim for 2–3 retainers or a mix of products + services. Document processes. Raise one rate. Add one automation or visual AI service.

10. Action Checklist

- ChatGPT / Claude account active and prompting practised
- 3–5 strong sample deliverables + one Custom GPT ready
- Payoneer/Grey + local payment method set up
- LinkedIn + Fiverr profiles live with clear AI service offers
- At least one digital product listed on Selar (even free lead magnet)
- 10+ personalised outreach messages sent
- Simple delivery + revision system documented
