

14 — Blogging & SEO Content Sites

WordPress · Google · AdSense · Affiliates · Digital products · 2026

Low capital (domain + hosting) · Long-term asset · Multiple income streams

How to build a niche blog or content site from Nigeria that ranks on Google and earns through ads, affiliates and your own products. Realistic timelines, monetisation stack and the practical setup that works.

1. What This Hustle Is

You create useful articles around a specific niche, optimise them for search (SEO), and attract free organic traffic from Google. Monetisation comes from display ads (AdSense and later premium networks), affiliate commissions, digital products and eventually sponsored content or email list offers. It is slower to start than freelancing but builds a lasting asset that can earn while you sleep.

2. Realistic Earnings Path 2026 (Nigeria)

Stage	Timeline	Typical monthly
Setup + early content	Months 1–4	■0 – ■30k
First rankings + AdSense	Months 5–9	■30k – ■150k
Compounding + affiliates	Months 10–18	■150k – ■500k
Established multi-stream	18–36+ months	■500k – ■2m+

Nigerian-audience RPM is lower than Western traffic. The real money comes from combining AdSense with affiliates (Expertnaire, Jumia, global programmes) and your own digital products. Pure AdSense-only blogs rarely hit high income.

3. Niche Selection That Pays

- Online income / freelancing / side hustles (high intent)
- Personal finance, saving, investing in Nigerian context
- Exam prep (JAMB, WAEC, IELTS strategies)
- Tech skills, tools, software reviews with affiliate potential
- Health, career, productivity with local relevance

Avoid pure news or entertainment unless you already have distribution.

4. Exact Setup (Low Capital)

- Domain (Namecheap / local registrars) ≈ ■5k–■12k/year
- Hosting (Whogohost, Namecheap, SiteGround, etc.) ≈ ■10k–■30k/year
- WordPress (free) + free or cheap theme (GeneratePress, Astra, Kadence)
- Essential plugins: SEO (Rank Math or Yoast), caching, security
- Google Search Console + Analytics from day one
- Optional: Canva for featured images, free stock or AI images

5. Content & SEO System

1. Keyword research (free tools + Google autocomplete + related searches).
2. Publish consistent, useful long-form articles (1,000–2,000+ words) that answer real questions.
3. On-page basics: clear title, headings, internal links, fast mobile pages.
4. Build a small email list early (even free tools) for launches and product sales.
5. Promote new posts on social and relevant communities without spam.

6. Monetisation Stack (Order That Works)

1. Google AdSense (apply after 10–15 solid posts + privacy/about/contact pages).
2. Affiliate links (Expertnaire, Selar, Jumia, Amazon, relevant SaaS).
3. Your own digital product or mini-course on Selar.
4. Later: premium ad networks (Ezoic etc.) once traffic is higher.
5. Sponsored posts or newsletter sponsorships once you have an audience.

7. Common Mistakes

- Jumping niches or publishing inconsistently.
- Thin, AI-only content with no original value or local context.
- Expecting income in the first 2–3 months.
- Relying only on AdSense and ignoring affiliates + products.
- Ignoring mobile speed and Core Web Vitals.

8. 90-Day Starter Path

Days 1–14: Niche decided. Domain + hosting + WordPress live. 5 cornerstone articles published. Search Console set up.

Days 15–45: Publish 2–3 quality posts per week. Start basic keyword targeting. Build simple email capture.

Days 46–90: Apply for AdSense. Add first affiliate links. Analyse what is ranking. Double down on winning topics.

Month 4+: Keep publishing. Launch first digital product. Grow email list. Review and improve top pages.

9. Action Checklist

- Niche chosen and validated for search + monetisation potential
- Domain + hosting + WordPress installed and secured
- Google Search Console + Analytics connected
- First 5–10 solid articles published
- Privacy, About and Contact pages live
- AdSense application prepared or submitted
- At least one affiliate programme joined
